### **New Enclosed Oil Sump.**

For over 50 years Japanese machines have been lubricated from an open oil sump, that is, the machine sat on top of the oil sump, but it was not sealed. This lubricated the machine very efficiently, increasing top speeds with less noise, increasing the overall life of the machine.

This was fine when the occasional oil stain was not a huge problem, but for dressmakers, and particularly wedding dresses the occasional oil stain was a disaster. Now with the enclosed sump, the oil will not get contaminated with dirt and pins, et cetera entering the sump. Also, no oil can get out to cause stains.

### **Control Panel**

The full featured control panel is built in, with direct drive servo motor, all self-contained as part of the machine.

The automatic thread trim can be switched on or off.

Back tack settings, et cetera are easily set and can easily be saved for future use.

Intelligent piece work function.

Change bobbin alarm.

Smart phone app for Bluetooth connection, with control system to test machine (optional).

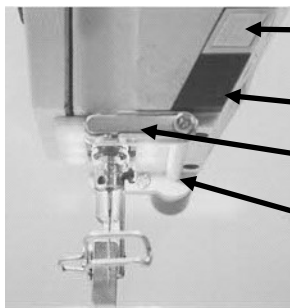

Stitch length the 5 mil, with dial lock to prevent slippage.

Built-in bobbin winder, with knife to trim bobbin thread.

Led light switch.

Reverse switch.

Thread nipper prevents "Bird Nest at Start"

Adjustable led light

Auto foot lift.

**All this for under**

**\$1,500.00**

**Plus GST**
